Though the unique development experience of the Indian State of Kerala had attracted wide spread interest, not much serious attempts had been made to assess the positive and negative aspects of Kerala's economy till early 1990s. This is one of the earlier attempts made to examine the performance and problems of the State's economy during the post formation period of the State from 1956 to 1991 and its prospects. The book contains 20 original essays by leading economists on Kerala's economy; demographic trends; employment; migration; agriculture and allied activities; industry and power; labour; education; trade and State finance.
